p. 2 *Stocks of Grains*

in All Positions

April 24, 1962

GRAIN STOCKS DECLINE--SOYBEANS INCREASE

Stocks of the four feed grains, wheat and rye in all positions on April 1 were smaller than a year earlier. Stocks of feed grains--corn, oats, barley and sorghum grain--totaled 132 million tons, 7 percent below the record April 1, 1961 holdings. Corn stocks at 3,386 million bushels were 8 percent below the record holdings of a year earlier while oats were 11 percent smaller, barley down 13 percent and sorghum grain less than 1 percent smaller. Wheat stocks were the second highest of record but were 4 percent below the record of a year ago. Rye and flaxseed stocks were sharply below a year earlier. Soybean stocks were the highest of record for the date--more than a third larger than last year.

All wheat stocks of 1,642 million bushels stored in all positions were 4 percent below a year earlier but nearly one-half larger than average. Off-farm stocks of 1,431 million bushels were the second largest of record. Disappearance of wheat from all positions during the January-March quarter at 340 million bushels was below the record 361 million bushel disappearance during the same quarter a year earlier but still ranked among the heaviest of record. More than three-fourths of the total stocks were either owned by the Government or were under Government loan. Durum-wheat stocks were estimated at 12.6 million bushels compared with 18.1 million bushels on January 1, 1962.

Rye stocks of 14.6 million bushels dropped 5 percent below average in contrast to the much above average holdings of a year earlier. Rye held in commercial positions was 19 percent less than a year earlier while farm stocks dropped 43 percent. Disappearance during the January-March quarter was a relatively low 4.8 million bushels compared to 5.6 million bushels a year earlier. Although holdings in CCC bins made up less than 1 percent of the stocks, nearly 40 percent of the rye stocks were either owned by or under loan to CCC.

Corn stored in all positions on April 1, 1962 totaled 3,386 million bushels--8 percent less than a year earlier but 45 percent above average. A 1961 corn crop that was 7 percent smaller than the previous year, coupled with heavy disappearance, resulted in lower April 1 stocks in spite of a record carry over of corn at the start of the feeding year. Off-farm stocks of 1,236 million bushels were 22 percent below April 1, 1961 with about the same percentage decline in interior mills, elevators and warehouses, and CCC bins. Farm stocks of 2,149 million

bushels were 3 percent above a year earlier. Corn owned or under loan to the Government made up more than half of the total stored corn. Disappearance from all storage positions during the January-March quarter was a record 1,110 million bushels, nearly 9 percent above the previous high for the same quarter last year.

Oats stored in all positions totaled 494 million bushels, 11 percent less than last April and the 10-year average. April 1 farm stocks, at 432 million bushels, were 11 percent smaller than a year ago and the 63 million bushels in off-farm storage were down 16 percent. Less than a tenth of the total stocks were owned by or under loan to CCC. Disappearance during the first three months of 1962 was 281 million bushels, 4 percent less than the 294 million bushel disappearance for the same period in 1961 and the smallest for this quarter since records were started in 1944.

Barley stocks in all storage positions on April 1, at 215 million bushels, were 13 percent less than a year earlier but 11 percent above average. Farm stocks were estimated at 98 million bushels, nearly a fourth smaller than those of last April but off-farm holdings were only slightly less than a year earlier. Barley owned by or under loan to CCC accounted for about a third of the total stocks this year compared with 44 percent a year ago. Disappearance from all storage positions during the January-March quarter was a record 119 million bushels. This compares with the 111 million bushel disappearance for the same period last year and the previous record for this quarter of 116 million bushels in 1960.

Sorghum grain stocks in all positions on April 1 totaled 853 million bushels, slightly less than the record for this date of 860 million bushels last year. Off-farm stocks at 768 million bushels were up 2 percent from April 1, 1961. However, farm holdings declined to 85 million bushels, 22 percent less than the quantity stored on farms last April 1. Nearly nine-tenths of the April 1 stocks were owned by or under loan to CCC. Disappearance during the first quarter of 1962 totaled 188 million bushels, compared with 173 million bushels for this quarter last year.

Soybean stocks in all storage positions on April 1 totaled 359 million bushels, the highest of record and more than a third larger than April 1, 1961. Practically all of the increase occurred in farm holdings as off-farm stocks were about the same as a year earlier.

April 1 stocks indicate a disappearance during the 6 month period October 1961-March 1962 of 340 million bushels from a supply of 699 million bushels (carryover of 6.0 million bushels plus production of 693 million bushels). During the period 230 million bushels were processed for oil and about 93 million bushels were exported. Minor quantities were fed to livestock and some new crop beans were crushed prior to October 1. In addition, there were some field losses occurring in an area centering around northern Missouri and extending into Iowa, Illinois, Nebraska and Kansas as prolonged winter and early spring

(Continued on page 11)

1/ Estimates of the Crop Reporting Board.

2/ Owned by C.C.C. and stored in bins or other storages owned or controlled by C.C.C.; other C.C.C.-owned grain is included in the estimates by positions.

3/ All off-farm storages not otherwise designated, including flour mills, terminal elevators, and processing plants.

4/ Totals included in all wheat.

5/ Farm stocks not available for April 1 prior to 1957.

precipitation prevented the completion of harvest. Growers are still attempting to salvage as much of the acreage as possible.

Flaxseed stocks in all storage positions on April 1 totaled 9.1 million bushels, 6.2 million bushels below holdings a year earlier. Off-farm stocks were 52 percent below a year earlier, while farm stocks were down only 19 percent from April 1, 1961.

April 1 stocks indicate a disappearance during the July 1961-March 1962 period of 18.1 million bushels from a supply of 27.2 million bushels (carryover of 5.3 million plus the 1961 production of 21.9 million bushels). During the period 15.3 million bushels were processed and 1 million bushels were exported.

The data in this report are assembled by the Crop Reporting Board, bringing together stocks of CCC owned grains reported by the Grain Branch of Agricultural Stabilization Conservation Service as stored in bins, ships, and other storages under CCC control and estimates of the Crop Reporting Board for stocks on farms and at mills, elevators, warehouses, terminals, and processors.
